

Gulliver

Platform-lift

Vertical Lifting System
with Shaft

The Minilift* Gulliver is the result of years of technical research and development with special attention paid to customer needs regarding safety and comfort. The Minilift Gulliver can be perfectly adapted to a wide variety of public and residential buildings.

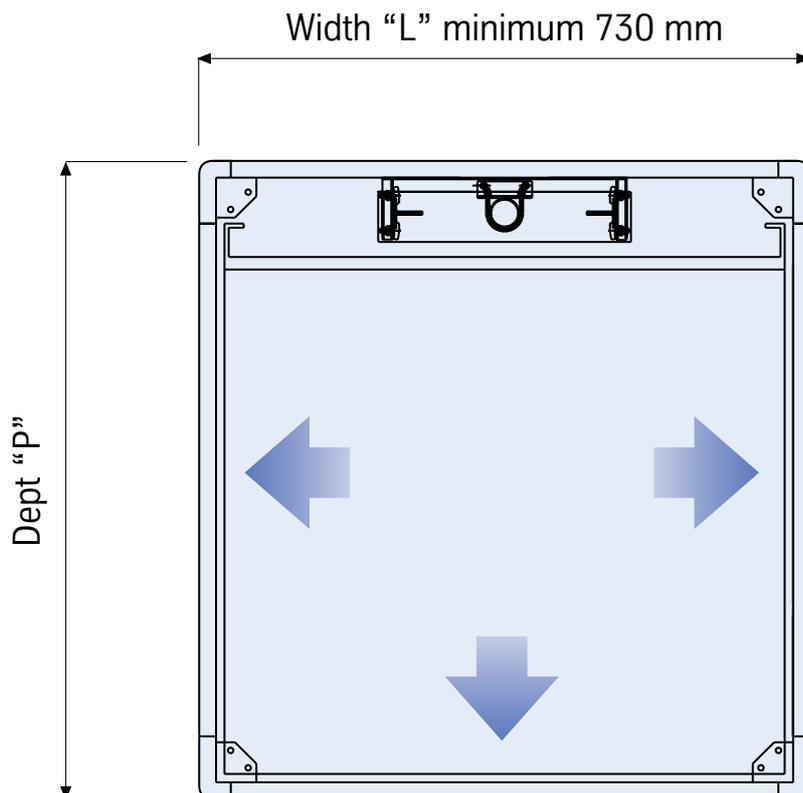

The Minilift* Gulliver consists of a shaft constructed with glass panels and a powder-coated aluminium structure, enabling installation without the need of a masonry shaft.

The quality of the materials used, the attention to detail and the various accessories available make the Minilift* Gulliver a perfect match to its surrounding environment. The Minilift* Gulliver requires very little space and no particular architectural changes (pit, header and machine room).

The Minilift* Gulliver complies to the relevant European directives (D.M. 236/89, Machine Directive 98/37/CE-ex 89/392/CEE). It is certified to CE, IMQ and TÜV.
